

SOFTENG 254:
Quality Assurance
Lecture 1a: Introduction

Paramvir Singh
School of Computer Science

Agenda

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- Admin
 - Labs are neither assessed nor compulsory, but are examinable
 - Start Thursday this week ⇒ **ON** (JUnit Review)
- What is Software Engineering
- What is Software Quality Assurance
- The software lifecycle (details in Part-2)

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- [“ilities”](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

People

Paramvir Singh Course Coordinator, Lecturer

p.singh@auckland.ac.nz

Office hours: Zoom 

Aiden Burgess Tutor

Sreeniketh Raghavan Tutor

Details on Canvas

PART II ECSE ASSISTANCE CENTRE

Semester Two starts on Week 2

EEE and COMPSYS: Wednesdays 12-1pm & 3-4pm | Thursdays 1-3pm

Software: Mondays 3-4pm | Thursdays 10am-12pm

Leech Study Space, during teaching weeks only

PART II ECSE ASSISTANCE CENTRE

Leech Study Space

Semester Two hours

EEE and COMPSYS:

- **Wednesdays 12-1pm**
- **Wednesdays 3-4pm**
- **Thursdays 1-3pm**

Software:

- **Mondays 3-4pm**
- **Thursdays 10am-12pm**

FREE support is provided to help you:

- **Prepare for tests or exams**
- **Go through weekly tutorial problems**
- **Prepare for assignments by working through similar model questions**

Group or one-on-one tutoring is available so come along and bring a friend!

Communication

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- Meetings — lectures, tutorials, labs, office hours, Zoom, Discord.
- Resources
 - Canvas — **course outline**, assignment handouts, possibly other stuff
- Course marks — Canvas
- Email — **Electronic Mail is an official and the primary means of communication with students**
- Journal Construction

Communication

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- Email — students \Leftrightarrow course staff
- Canvas Announcements/notifications — course staff \Rightarrow students
- Piazza (piazza.com) is available via Canvas — invitations already sent (if not, contact me by email)
 - asynchronous broadcast by all
 - ask questions that can be answered by anyone in the class (including course staff)
 - Use for general discussion on course matters
 - **Do not post answers to assignment questions**

Course schedule

Week	Wed Lecture - 1	Wed Lecture - 2	Thurs Lecture - 1	Thurs Lecture - 2	Lab	Assignment
1	Course Introduction	Software Quality	Overview of Testing	Statement Coverage	Drop-In (Thursday only)	
2	Paths	Practicalities	Data flow testing - 1	Tutorial	Drop-in	
3	Data flow testing - 2	Input Space Partitioning	Logic Coverage	Tutorial	Drop-in	Iteration 1 (A1) due
4	Decision Tables	Testing the whole system	Impact of Language features on testing	Tutorial	Drop-in	
5	Mock Testing	Measurement Theory	Software Metrics	Discussion	Drop-in	
6	Test1		Other Topics	Discussion	Drop-in	
7	Part-2 Introduction	Software Development Process - 1	Software Development Process - 2	CMMI	Drop-In (Thursday only)	Iteration 2 (A2) due
8	Revisiting Object-Oriented Modelling	Modelling with UML - I	UI Modelling	Tutorial	Drop-in	
9	Software Design	Smells and Refactoring	Reflection	Tutorial: Software Modelling and Design	Drop-in	Iteration 3 (A3) due
10	Source and Version Control	Git and GitHub	Git and GitHub - 2	Tutorial	Drop-in	
11	Bug Tracking Systems	Automated Build Scripts	Continuous integration	Build Environments and Dev-Ops	Drop-in	
12	Test2		Code Comprehension	Discussion	Drop-in	Iteration 3 (A4) due

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

Examinable Material

- Lecture slides
- Lecture content (what is said, not just what is on the slides)
- Lab content
- Assignment content
- Suggested readings
- Piazza comments
- Announcements

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

Journal

- May be taken into tests and exams
- Can be used to record: lecture notes, thoughts, questions, work log
- Cannot contain material pasted in except,
 - where specifically stated
 - for pasting prints of digital handwritten notes (annotated lecture slides are not allowed)
- Used for official lab write-ups
- Journals will be checked for rule compliance during the tests and exam

Full Guidelines and Resources

- *Note taking and Journal Writing* page on Canvas

At the end of each lecture

- You should spend some time revising your notes, and sharing and discussing the same with your peers.

What is Software Engineering?

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

Responsible application of theories of software development to provide cost effective construction of software systems that provide value to other people

- “other people” — not software systems that at most the builder will use
- “value to other people” — not software systems that deliver functionality that is of no use (e.g., faulty, hard to use, not actually useful) to the customer
- “systems” — big things and things that integrate with big things, not little things

What is Software Engineering?

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

Responsible application of theories of software development to provide cost effective construction of software systems that provide value to other people

- “cost effective” — not software systems that cost a lot to build or cost a lot over their lifetimes (design has relevant quality attributes)
- “theories of software development” — not theories of artificial intelligence, theories of computation, theories of signal processing
- “application of theories” — not development of theory, not (just) presentation of theory
- “responsible” — the engineers involved in the construction accept responsibility for the resulting system and the consequences of its use

- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- anything not hardware in a computer system that is of value to a stakeholder of the system
- stakeholders include:
 - users (of different kinds)
 - customer or whoever pays the bill
 - developers (current and future)
 - managers of developers/users/customers
 - regulators, those who check for legal compliance
 - customers of users

What is Quality?

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- [“ilities”](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

What is Quality?

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- “contains no bugs” (whatever “bug” means)
- “works properly” (whatever “properly” means)
- does what the customer wants
 - which customer? the person paying the bill?
 - not the user?
 - what about other stakeholders?
 - what about what the stakeholder needs?

What is Quality?

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- “contains no bugs” (whatever “bug” means)
- “works properly” (whatever “properly” means)
- does what the customer **wants**
 - which customer? the person paying the bill?
 - not the user?
 - what about other stakeholders?
 - what about what the stakeholder **needs**?

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

What is Quality?

- “contains no bugs” (whatever “bug” means)
- “works properly” (whatever “properly” means)
- does what the customer **wants**
 - which customer? the person paying the bill?
 - not the user?
 - what about other stakeholders?
 - what about what the stakeholder **needs**?
- Our meaning —

Everyone* associated with the software system has as good experience as possible

*including developers

“ilities”

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- [“ilities”](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- **fitness for use**
- correctness — does it contain faults
- reliability — how likely is it to fail
- performance — is it fast enough/doesn't need too much space
- maintainability — how easy is it to do maintenance in the future
- modifiability — how easy is it to change
- availability — how likely is it to be around when the user wants it
- reusability — how easy is it to reuse in different systems
- usability — how painful is it to use

What is Quality Assurance?

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- “book” meaning — Making sure that the *process* for developing software has good quality (fitness for purpose) — tries to **reduce mistakes**
- common interpretation — Making sure that the *product* has good quality

What is Quality Assurance?

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- “book” meaning — Making sure that the *process* for developing software has good quality (fitness for purpose) — tries to **reduce mistakes**
- common interpretation — Making sure that the *product* has good quality
- Our meaning — Making sure that the client is satisfied with the result

The Life of Software

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

The Software “Lifecycle”

Requirements

Determine what the system should be (functional and non-functional)

Specification

Describe requirements precisely

Architecture

Make high-level decisions about design

Detailed Design

Make low-level decisions about design

Implementation

Create executable system

Testing

Check created system is “correct”

Deployment

Install system in customer’s environment

Operation

Support day-to-day usage as contracted

Maintenance

Keep system useful to customer

Retirement

Software Development Process

- [Agenda](#)
- [People](#)
- [Communication](#)
- [Course Schedule](#)
- [Examinable Material](#)
- [Journal](#)
- [Software Engineering](#)
- [Quality Assurance](#)
- [Software](#)
- [Quality](#)
- ["ilities"](#)
- [Software Lifecycle](#)
- [Software Development Process](#)

- *process* — an ordered series of steps to accomplish a set of tasks
- activities that use resources, are subject to constraints
- descriptive or prescriptive
- supports *risk management* by capturing “best practice”
- provides natural units on which to base quality assurance (activities)
- Often-mentioned examples:
 - Waterfall — idealised view of software development based on lifecycle
 - Spiral — early process that emphasised *iteration* and risk management (Barry Boehm)
 - Rational Unified Process (RUP) — more recent (and different) also emphasising iteration and risk management, often associated with UML (Philippe Kruchten)
 - Agile — plan to react to change, e.g. eXtreme Programming (XP) takes iteration (and other things) to the extreme (Kent Beck)
